Data Analytics
Exercise 1: SQL fundamentals

1. SELECT* ✗ Select Count(id) As number of emp
FROM Employees_db ; ✓

2. SELECT DISTINCT department
FROM ~~*~~ Employees_db ;

3. SELECT First_name,
Last_name
FROM Employees_db
ORDER BY Salary DESC ;

4. SELECT*
FROM Employees_db
Limit 5 ~~Top~~ 'highist-paid_employees' ;

5. Select Department
FROM Employees_db
WHERE ~~'IT' ;~~ Department 'IT' ;

6. AND statement
SELECT Department,
Salary
FROM Employees_db
WHERE Department = 'IT' AND SALARY > 58,000' ;

7. SELECT Department
FROM Employees_db
WHERE Department = 'HR' OR 'Marketing' ;

8. SELECT Department
FROM Employees_db
WHERE NOT Department = 'IT';

9. SELECT Department
FROM Employees_db
WHERE Department IN ('HR', 'IT', 'Finance

10. SELECT Department,
Salary
FROM Employees_db
WHERE Department = ('IT') AND Salary >50,0
AND Location = 'NEW_York';

11. SELECT Last_name,
Department
FROM Employees_db
WHERE Department = ('Finance', 'marketing') AND
Salary >52,000
ORDER BY Salary desc

12. SELECT DISTINCT City
FROM Employees_db

13. SELECT Department
FROM Employees_db
WHERE ~~employee~~ department = NOT 'Finance'
AND Salary > 50,000
ORDER BY hire_date ASC

14. SELECT City
From Employees_db
WHERE city IN('Chicago' OR' los Angeles')
AND department('IT' OR' marketing
Limit First 3;
